## Working of k and I

Let's say following	are directories in your folder:
••	
Α	
В	
С	
D	
E	
F	
G	
	rour window size is 5, i.e., you can display at max 5 directories on your screen, then topisplayed as follows:
••	
A	
В	
С	
D	
E	
F	
G	

A B C D E F G Again if we press I key again then window should move one down and display directories something like this:
A B C D E F G Again if we press I key again then window should move one down and display directories something like
B C D E F G Again if we press I key again then window should move one down and display directories something like
C D E F G Again if we press I key again then window should move one down and display directories something like
E F G Again if we press I key again then window should move one down and display directories something like
E  F  G  Again if we press I key again then window should move one down and display directories something like
F G Again if we press I key again then window should move one down and display directories something like
Again if we press <b>I key</b> again then window should move one down and display directories something like
Again if we press <b>I key</b> again then window should move one down and display directories something like
•
A
В
C
D
E
F
G

Now if we press <b>k key</b> then window should move one up and display directories something like this:	
А	
В	
С	
D	
E	
F	
G	
Now if we press <b>k</b> this:	key again then window should move one up and display directories something like
•	
Α	
В	
С	
D	
E	
F	
_	
G
